About me

Hi! I'm a 19-year-old HSE student majoring in economics, with a keen interest in data science and data analytics. Over the past year, I have focused on learning Python and data-oriented libraries such as Pandas, sklearn, Numpy, xgboost, plotly, matplotlib, etc.

I have participated in two Kaggle competitions: banking scoring and prediction of user churn. While studying at the CMF, I managed to build a few functions allowing to import the macro data into Python and even create a gif showing the distribution of the selected macro variable on the map.

Currently, I'm a student at graduate program at CMF, Deep Learning School, and the School of Analytics. I participated in team projects: Solving Sber Time Series Prediction and Replication of Macro Paper in the Field of Auto Correlations.

Education

- 2022–2026 **Student**, *Higher School of Economics*, Moscow
Economics
- 2022–2023 **Graduated**, *Center of Mathematical Finance*, MSU, Moscow
Data science
- 2023 **Student**, *School of Analytics*, MSU, Moscow
Data analysis
- 2023 **Student**, *Deep Learning School*, MIPT, MSU
Data science

Projects

- Completed Bank scoring
- Completed Prediction of consumer outflow
- Completed Predicting the number and timing of delivery orders for SberMarket
- Completed Replication an Article with Baxter-King approach
- Completed Predicting inequality using adaptive linear regression
- Completed Macroeconomics variables GIF maker
- In Progress LFT: Quantitative Research
